Course pre-requisite:

FEC102 - Engineering Physics-I

FEC202 - Engineering Physics-II

ECC302 - Electronic Devices & Circuits

ECC405 - Principles of Communication Engineering

ECC501 - Digital Communication

ECC601 - Electromagnetics and Antenna

Course Objectives:

- Introduction to optical fiber network it's need, elements and fundamentals.
- To learn Parameters that limits the repeaterless transmission, its mitigation and Managing techniques.
- To learn high speed optical sources, detectors and Amplifiers.
- Study the multiplexing schemes SDH ,PDH and WDM and its applications for current and NGNs
- To have an insight into optical packet switched, bust switched and advanced networks
- Learn high speed network management techniques and challenges in its counterpart Free Space Optics

Course Outcome:

- Understand optical networks at large by identifying the types of fibers, cables and deployment.
- Design point to point optical fiber communication links using appropriate optical fibers, light sources, couplers, detectors, and multiplexers.
- Design a short haul or long-haul optical network with repeater by incorporating suitable amplifiers.
- Compare SDH, PDH and WDM techniques and implement.
- Explore concepts of designing and operating principles of modern optical communication systems and networks.
- Apply the knowledge acquired to design the next generation fiber and FSO networks for indoor and outdoor applications

Internal Assessment (20-Marks):

Internal Assessment (IA) consists of two class tests of 20 marks each. IA-1 is to be conducted on approximately 40% of the syllabus and IA-2 will be based on remaining contents (approximately 40% syllabus but excluding contents covered in IA-I). Duration of each test shall be one hour. Average of the two tests will be considered as IA marks.

End Semester Examination (80-Marks):

- 1. Question paper will comprise of **total 06** questions, each carrying **20 marks**.
- 2. **Question No: 01** will be **compulsory** and based on entire syllabus wherein 4 to 5 sub-questions will be asked.
- 3. Remaining questions will be mixed in nature and randomly selected from all the modules.
- 4. Total 04 questions need to be attempted.

Course Objectives:

- 1. To introduce modern system design using SoC
- 2. To understand the concept of hardware software co-design
- 3. To learn software and hardware design integration

Course Outcome:

After successful completion of the course student will be able to

CO1: Explain basics of SoC design CO2: Design and verify SoC system

CO3: Explain physical design flow

CO4: Analyze routing issues in SoC Design

CO5: Interpret complex SoC design issues

CO6: Explain non-technical issues related to SoC

Course Pre-requisite:

_

Course Objectives:

- 1. To understand natural language processing and to learn how to apply basic algorithms in this field.
- 2. To get acquainted with the basic concepts and algorithmic description of the main language levels: morphology, syntax, semantics, and pragmatics.
- 3. To design and implement applications based on natural language processing

Course Outcomes:

After successful completion of the course student will be able to:

- 1. Have a broad understanding of the field of natural language processing.
- 2. Understand the mathematical and linguistic preliminaries necessary for various processes in NLP
- 3. Be able to Design, implement and test algorithms for NLP problems
- 4. Perform Word-Level, Syntax-Level and Semantic-Level Analysis
- 5. Develop basic understanding of Pragmatics in NLP
- 6. Be able to apply NLP techniques to design real world NLP applications

Internal Assessment (20-Marks):

Internal Assessment (IA) consists of two class tests of 20 marks each. IA-1 is to be conducted on approximately 40% of the syllabus and IA-2 will be based on remaining contents (approximately 40% syllabus but excluding contents covered in IA-I). Duration of each test shall be one hour. Average of the two tests will be considered as IA marks.

End Semester Examination (80-Marks):

Weightage to each of the modules in end-semester examination will be proportional to number of respective lecture hours mentioned in the curriculum.

- 1. Question paper will comprise of total 06 questions, each carrying 20 marks.
- 2. **Question No: 01** will be **compulsory** and based on entire syllabus wherein 4 to 5 sub-questions will be asked.
- 3. Remaining questions will be mixed in nature and randomly selected from all the modules.
- 4. **Total 04 questions** need to be attempted.

Course Pre-requisite:

- 1. Electromagnetic and Antenna
- 2. Principles of Communication Engineering
- 3. Microwave Engineering

Course Objectives: The course should enable the students to:

- 1. To learn RF circuit fundamentals for designing various circuit building blocks in a typical RF
- To learn importance of EMI/EMC

Course Outcomes:

- 1. Design impedance matching networks and passive RF filters
- 2. Design and appraise the RF amplifiers
- 3. Design and appraise the RF oscillators
- 4. Differentiate the RF mixers
- 5. Analyze EMI and EMC in RF circuits
- 6. Analyze stability of RF trans-receiver

ECC603 : IPMV ECC604 : ANNFL

ECCDLO7012: Deep Learning

Course Objectives:

- 1. Introduction to Autonomous vehicles/SDC (Self Driving Cars), advantages and challenges in SDC's.
- 2. Gain Knowledge about the Sensors in SDC's.
- 3. Understand the in-vehicle communication aspects in SDC's
- 4. Understand perception and localization in SDC.
- 5. Get to grips with planning and control in SDC.
- 6. To know the various applications of SDC's.

Course Outcome:

After successful completion of the course student will be able to

- 1. Understand fundamentals of SDC (Self Driving Cars).
- 2. Compare different types of Sensors in SDC's.
- 3. Illustrate different protocols of In vehicle communication for SDC's.
- 4. Identify perception and localization in SDC's.
- 5. Analyze planning and control in SDC.
- 6. Evaluate different applications and algorithms in SDC's.

Prerequisites:

- Analog Communication
- Digital Communication

Course objectives:

- To understand the basics of satellite communications and different satellite orbits
- Provide an in-depth understanding of satellite communication system operation, launching techniques, and earth station technology
- To Analyze and evaluate satellite link design
- To review structure design, payload and space segment related to Nano satellite.

Course outcomes:

After successful completion of the course student will be able to

- Understand the basic concepts of satellite communication system and orbital parameters.
- Explain various satellite sub-systems, earth station technologies and launching mechanisms.
- Analyze and evaluate link budget and various performance parameters of satellite signal for proper communication.
- Understand Nano satellite's structure design, payloads, Thermal control system and space segment

ECC602- Computer Communication Networks

Course Objectives:

- 1. To understand the concepts of network management in Telecommunication (NMT), architectures and protocols.
- 2. To familiarize the student with the design, analysis, operation and management of modern data communications networks.
- 3. To provide the student with a working knowledge of the types of communication network management systems and their strengths and limitations in solving various information network management problems.

Course Outcome:

After successful completion of the course, the student will be able to:-

- 1. Explain the need for interoperable network management and analyze the trends and development of the Telecommunications Network Management.
- 2. Demonstrate broad knowledge of fundamental principles and technical standards underlying NMT.
- 3. Describe the concepts and architecture behind standards-based network management associated with SNMP and CMIP.
- 4. Apply basics of telecommunication, networking and information technologies and architect and implement networked informative systems.
- 5. Continuously improve their knowledge of technology and communication skills.

Internal Assessment (IA) consists of two class tests of 20 marks each. IA-1 is to be conducted on approximately 40% of the syllabus and IA-2 will be based on remaining contents (approximately 40% syllabus but excluding contents covered in IA-I). Duration of each test shall be one hour. Average of the two tests will be considered as IA marks.

End Semester Examination (80-Marks):

- 1. Question paper will comprise of **total 06** questions, each carrying **20 marks**.
- 2. **Question No: 01** will be **compulsory** and based on entire syllabus wherein 4 to 5 sub-questions will be asked.
- 3. Remaining questions will be mixed in nature and randomly selected from all the modules.
- 4. **Total 04 questions** need to be attempted.

Course Prerequisite:

- 1. Electromagnetics and Antenna
- 2. Microwave Engineering

Course Objectives:

In the course, Students will be introduced to:

- 1. Fundamental parameters and characteristics of Microstrip Antennas(MSA)
- 2. Design and analysis of Rectangular and Circular MSA.
- 3. Different compact and broadband techniques of MSA.
- 4. Circularly Polarized MSA's and various applications in wireless communication systems.

Course Outcomes:

After successful completion of the course student will be able to:

- 1. Apply the fundamental parameters of MSA.
- 2. Analyze Rectangular and Circular MSA.
- 3. Identify various compact and broadband methods of MSA.
- 4. Examine the methods of circular polarization.
- 5. Compare various applications of MSA.

Prerequisite: Programming Language, Computer Graphics

Course Objectives: The course aims:

- 1. To learn the underlying concepts of Augmented and Virtual Reality and primitives of computer graphics.
- 2. To understand the use of hardware devices in AR-VR system.
- 3. To understand the tracking system in AR.
- 4. To apply concept of calibration and registration of different components in AR system
- 5. To design AR-VR applications.
- 6. To understand the use of AR-VR in interdisciplinary immersive applications

Course Outcomes: On successful completion of this course, learner /student will be able to:

- 1. Identify and compare different Virtual and Augmented Reality Technologies and apply modelling techniques.
- 2. Identify and use AR-VR hardware components.
- 3. Apply concepts of Computer Vision for tracking in AR Systems.
- 4. Apply calibration techniques and registration for components in AR.
- 5. Design AR-VR application
- 6. Apply insights of AR-VR in different applications.

Objectives:

- 1. To familiarize the students with the use of a structured methodology/approach for each and every unique project undertaken, including utilizing project management concepts, tools and techniques.
- 2. To appraise the students with the project management life cycle and make them knowledgeable about the various phases from project initiation through closure.

Outcomes: Learner will be able to...

- 1. Apply selection criteria and select an appropriate project from different options.
- 2. Write work break down structure for a project and develop a schedule based on it.
- 3. Identify opportunities and threats to the project and decide an approach to deal with them strategically.
- 4. Use Earned value technique and determine & predict status of the project.
- 5. Capture lessons learned during project phases and document them for future reference

Assessment:

Internal:

Assessment consists of two tests out of which; one should be compulsory class test and the other is either a class test or assignment on live problems or course project.

End Semester Theory Examination:

Some guidelines for setting up the question paper. Minimum 80% syllabus should be covered in question papers of end semester examination. In question paper weightage of each module will be proportional to number of respective lecture hours as mention in the syllabus.

- 1. Question paper will comprise of total six question
- 2. All question carry equal marks
- 3. Questions will be mixed in nature (for example supposed Q.2 has part (a) from module 3 then part (b) will be from any module other than module 3)
- 4. Only Four question need to be solved.

Internal:

Assessment consists of two tests out of which; one should be compulsory class test and the other is either a class test or at least 6 assignment on complete syllabus or course project.

End Semester Theory Examination:

Some guidelines for setting up the question paper. Minimum 80% syllabus should be covered in question papers of end semester examination. In question paper weightage of each module will be proportional to number of respective lecture hours as mention in the syllabus.

- 1. Question paper will comprise of total six question
- 2. All question carry equal marks
- 3. Questions will be mixed in nature (for example supposed Q.2 has part (a) from module 3 then part (b) will be from any module other than module 3)
- 4. Only Four question need to be solved.

Course Objectives:

- 1. To make students understand and familiarize with different types of optical fibers.
- 2. To enable the students to measure the fundamental parameters such as numerical aperture, losses dispersion for single mode and multimode fibers
- 3. Expose the students to realize the dynamic change in the network performance when various sources, Amplifiers, detectors, components and fibers are incorporated.
- 4. In depth exposition to the point-to-point link, metro network, WDM network and DWDM Network
- 5. To understand the basic concepts and challenges in free space optical systems

Course Outcome:

On completion of this lab course the students will be able to:

- 1. Acquire proficiency in identifying the different types of fibers and understanding their properties.
- 2. To measure the losses, dispersion and compensation techniques in all optical network.
- 3. Learn to design all optical network with amplifiers and modern lasers for error free transmission.
- 4. To design or implement point to point optical fiber network, WDM or DWDM Network.
- 5. To design free space optical system with atmospheric impairments and propose mitigation technique for minimum BER.

Suggested Experiment List

- Calculation of Numerical aperture for SMF and MMF
- Calculation of dispersion for given fiber and its measurement
- Calculation of link Loss for given link
- Performance analysis of Single mode fiber
- Performance analysis of multimode fiber
- Performance Analysis of Optical Link with Different Sources
- Performance Analysis of Optical Link with Different Detectors
- Performance Analysis of Optical Amplifier

- Designing of point-to-point optical network using tools or software
- Designing of Metro network/WAN using tools or software
- Designing of WDM network using tools or software
- Designing of FSO using tools or software

Note: Small Project on implementation of indoor fiber optical network or free space optical network can be considered as a part of term-work.

Term Work:

At least 08 Experiments including 02 simulations covering entire syllabus must be given during the "Laboratory session batch wise". Computation/simulation-based experiments are also encouraged. The experiments should be students centric and attempt should be made to make experiments more meaningful, interesting and innovative. Application oriented one mini-project can be conducted for maximum batch of four students.

Term work assessment must be based on the overall performance of the student with every experiments/tutorials and mini-projects (if included) are graded from time to time. The grades will be converted to marks as per "Choice Based Credit and Grading System" manual and should be added and averaged. Based on above scheme grading and term work assessment should be done.

The practical and oral examination will be based on entire syllabus.

Objective: The primary objective is to meet the milestones formed in the overall project plan decided in Project - I. The idea presented in Project -I should be implemented in Project -II with results, conclusion and future work. The project will culminate in the production of a thesis by each individual student.

Guidelines:

Project Report Format:

At the end of the semester the student needs to prepare a project report which should be prepared as per the guidelines issued by the University of Mumbai. Along with the project report a CD containing: project documentation, Implementation code, required utilities, Software_s and user Manuals need to be attached.

Term Work:

Student has to submit weekly progress report to the internal guide and the internal guide has to keep a track on the progress of the project and also has to maintain the attendance report. This progress report can be used for awarding the term work marks. In case of industry projects, visit by internal guide will be preferred to get the status of project. Distribution of marks for term work shall be as follows:

- a) Weekly Attendance on Project Day
- b) Project work contributions as per objective
- c) Project Report (Hard Bound)
- d) Term End Presentation (Internal)

The final certification and acceptance of TW ensures the satisfactory performance on the above aspects.

Oral & Practical:

Oral & Practical examination of Project- II should be conducted by Internal and External examiners approved by University of Mumbai. Students have to give presentation and demonstration on the Project-II.
